SkyScan micro-CT support products

Introduction

Micro Photonics supplies a range of *support products* to assist you with your SkyScan micro-CT scanner from Bruker MicroCT. This list does not however include the special stages with embedded microprocessor controllers (material testing stage, cooling stage, heating stage and the micro-positioning stage).

These products will significantly assist you in the mounting of samples for scanning. You should be aware that stable and symmetrical mounting of samples for scanning will enhance the quality and repeatability of scans and analysis results. Other products in this catalog include alignment pins, calibration phantoms for bone mineral density (BMD), and aluminum thickness measurement phantom.

1. Sample holders, *ex vivo* scanners (1172, 1173, 1174, 1272, 1273, 1275, 2211 and 2214)

Special object holders

Item #	Item	Description	Image	Price USD
SKY-000214	Tube Holder Set	Set of plastic tube sample holders, various diameters, supported by a metal base. Tubes are 8 cm high, with internal diameters of (approx.) 6, 10, 15, 20 mm. Includes: metal base, 2 large screws (base to scanner), 4 small screws (tube to base), 4 plastic tubes, 4 plastic lids, Allen key (for set-screws), Phillips screw driver.		2,730
	Extra tubes for Tube Holder Set	Tubes are 8 cm high, with internal diameters of (approx.) 6, 10, 15, 20 mm. Tubes are provided with plastic lids. Tubes plus lids are supplied in batches of 5.		
SKY-006866	Tube set, 6mm	Set of tubes 6mm inner diameter, with lid	See above tube (1)	310
SKY-006869	Tube set, 10mm	Set of tubes 10mm inner diameter, with lid	See above tube (2)	310

Item #	Item	Description	Image	Price USD
SKY-006867	Tube set, 15mm	Set of tubes 15mm inner diameter, with lid	See above tube (4)	310
SKY-006868	Tube set, 20mm	Set of tubes 20mm inner diameter, with lid	See above tube (4)	310
SKY-005461	"Spider" object mount	Mount with screw-adjustable fingers to hold objects of variable geometry. Each "finger" is screw-adjusted to obtain a grip on any object including objects with irregular and asymmetric geometry.		1,600

Item #	Item	Description	Image	Price USD
SKY-015490		Clip Holder for thin samples		470
SKY-008112	Holder for multiple Eppendorf tubes: small	A plastic tube holder for 3 tubes, 25 ul with safe-lock lid This tube assembly fits onto the base of the tube holder set item 1001. Single tube		320
SKY-008106	Holder for multiple Eppendorf tubes: medium	A plastic tube holder for 2 tubes, 0.5ml with safe-lock lid This tube assembly fits onto the base of the tube holder set item 1001. Single tube		320

Item #	Item	Description	Image	Price USD
SKY-008110	Holder for multiple Eppendorf tubes: large	A plastic tube holder for 2 tubes, 2 ml with safe-lock lid This tube assembly fits onto the base of the tube holder set item 1001. Single tube		320
SKY-005842	Large object mount	Large object mount for SkyScan 1272, 1275, 1173		2,400
Tubes to use on metal base				
SKY-014675	Tube Holder Set Large	Set of plastic tube sample holders on a metal base for SKYSCAN 1273, SKYSCAN 1275 and SKYSCAN 2214. Tubes are 12 cm in height, with internal diameters of (approx.) 6, 10, 15, 20 mm. Additionally one tube of 8.5cm height and 5mm inner diameter is included. Included: metal base, 2 large screws (base to scanner), 4 small screws (tube to base), 4 plastic tubes, 4 plastic lids, Allen key (for set-screws), Phillips screw driver.		3,100

Item #	Item	Description	Image	Price USD
SKY-011170	Tube	1 tubes for 5.5 micron resolution for 1173, 1275 and 2214 (Height 8.5cm, inner dia. 5mm, wall thickness 1mm)		310
SKY-011159	Tube	1 tubes for 7 micron resolution for 1173, 1275 and 2214 (Height 12cm ,inner dia. 6mm, wall thickness 1.5mm)		310
SKY-011160	Tube	1 tubes for 7 micron resolution for 1173, 1275 and 2214 (Height 12cm ,inner dia. 10mm, wall thickness 1.5mm)		310
SP-1023 SKY-011161	Tube	1 tubes for 7 micron resolution for 1173, 1275 and 2214 (Height 12cm, inner dia. 15mm, wall thickness 1.5mm)		310
SKY-011162	Tube	1 tubes for 7 micron resolution for 1173, 1275 and 2214 (Height 12cm,i nner dia. 20mm, wall thickness 1.5mm)		310

Item #	Item	Description	Image	Price USD
SKY-001484	Rotary Nut	Rotary Nut		48
Brass sample trays				
	Brass rod sample bases	Brass rod stands for small samples: at the top is a recessed tray with rim. Typically modelling clay or wax is used to affix the sample.		
SKY-002667	Brass rod	Base with 4mm diam., length 5.5 cm	(1, above image)	240
SKY-002434	Brass rod	Base with 4mm diam., length 4.7 cm	(2, above image)	300
SKY-002853	Brass rod	Base with 5mm diam., length 4 cm	(3, above image)	300

Item #	Item	Description	Image	Price USD
	Brass tray sample base	Brass stages for larger samples, circular with peripheral rim. These can be used to mount a wide range of samples, in conjunction with a mounting material such as dental wax (SP-2000) or a suitable plasticine or modelling clay (of a type that does not harden in air and is stable at high temperatures inside a scanner).		
SKY-002466	Brass tray	Base with 65mm diameter	(1, above image)	250
SKY-005169	Brass tray	Base with 52mm diameter	(2, above image)	250
SKY-002567	Brass tray	Base with 38 mm diameter	(3, above image)	250
SKY-005832	Brass tray	Base with 20 mm diameter	(5, above image)	250

Item #	Item	Description	Image	Price USD
SKY-019205	Polystyrene tubes (SKYSCAN 1272, 1273, 1275 and 2214)	Set of low-absorbing polystyrene tubes for use with SKYSCAN 1272, SKYSCAN 1273, SKYSCAN 1275 and SKYSCAN 2214.		620
SKY-014110		SMS Bottom (Aluminum Base)		Call for Pricing

2. Calibration phantoms

Item #	Item	Description	Image	Price USD
SKY-016946	Small 2-4mm BMD phantom set.	2mm-4mm diameter set (small). 2mm BMD rods are suitable for very small bones such as mouse bones; 4mm rods are applicable to rat bones. The rod pair has concentrations of 0.3 and 1.25 g/cm ³ CaHA. Also includes embedded foil thickness phantom (SP-0058)		2,400
SKY-016947	Medium 8-16mm BMD phantom set.	8mm-16mm diameter set (medium). The rod pair has concentrations of 0.3 and 1.25 g/cm ³ CaHA. Suitable for larger bones such as rabbit, sheep, human. Also includes embedded foil thickness phantom (SP-0058)		3,500
SKY-016948	Large 32mm BMD phantom set.	32 mm diameter set of BMD phantoms (large). The rod pair has concentrations of 0.3 and 1.25 g/cm ³ CaHA. Suitable for large bones such as human or large animal vertebrae. Also includes embedded foil thickness phantom (SP-0058)		2,800

3. Stages

Item #	Item	Description	Image	Price USD
SKY-006308	Cooling Stage	Cooling Stage (V1+V2) keeps an object at a preselected temperature during imaging and micro-CT scanning. It contains a two-stage solid-state Peltier thermopump Cooling stage keeps object in the controllable temperature down to < -15C. An internal microprocessor and a precision temperature sensor provide feedback to the stage control program for temperature stabilization during scanning at a pre-selected value, with 0.5°C accuracy.		Contact Micro Photonics for pricing
SKY-016941	Heating Stage	Heating Stage keep an object at a preselected temperature during imaging and micro-CT scanning. It contains a two-stage solid-state Peltier thermopump. Heating stage keeps objects in the temperature up to > +80C. An internal microprocessor and a precision temperature sensor provide feedback to the stage control program for temperature stabilization during scanning at a pre-selected value, with 0.5°C accuracy. Item #	Item	Description	Image	Price USD
SKY-016811	Materials testing stage 44 N	MTS2 - 44N (1275, 1272, 2211) The Material Testing Stage allows the user to combine micro-CT imaging with tensile and compression testing. During scanning the sample is subjected to a controlled load, while having the loading curve displayed on-screen in real time. The stage can be used in 2 modes: a continuous mode for compression or tension up to the maximum allowable load or until the maximum displacement; and a predefined mode in which the user can specify either the load or the displacement that should be reached.	 A photograph of the MTS2 - 44N Material Testing Stage. It is a black, cylindrical device with a silver-colored top section and a clear, cylindrical window in the center showing a blue, granular sample.	Contact Micro Photonics for pricing
SKY-016812	Materials testing stage 220 N	MTS2 - 220N (1275, 1272, 2211) The Material Testing Stage allows the user to combine micro-CT imaging with tensile and compression testing. During scanning the sample is subjected to a controlled load, while having the loading curve displayed on-screen in real time. The stage can be used in 2 modes: a continuous mode for compression or tension up to the maximum allowable load or until the maximum displacement; and a predefined mode in which the user can specify either the load or the displacement that should be reached.	 A photograph of the MTS2 - 220N Material Testing Stage. It is a black, cylindrical device with a silver-colored top section and a clear, cylindrical window in the center showing a blue, granular sample.	Contact Micro Photonics for pricing

Item #	Item	Description	Image	Price USD
SKY-016813	Materials testing stage 440 N	MTS2 - 440N (1275, 1272, 2211) The Material Testing Stage allows the user to combine micro-CT imaging with tensile and compression testing. During scanning the sample is subjected to a controlled load, while having the loading curve displayed on-screen in real time. The stage can be used in 2 modes: a continuous mode for compression or tension up to the maximum allowable load or until the maximum displacement; and a predefined mode in which the user can specify either the load or the displacement that should be reached.	 A photograph of the MTS2 - 440N Material Testing Stage. It features a black cylindrical base with a silver-colored top section containing a blue, granular sample. The device is mounted on a dark surface.	Contact Micro Photonics for pricing
SKY-016616	Materials testing stage 2200 N	MTS2 - 2200N (1275, 1272, 2211) The Material Testing Stage allows the user to combine micro-CT imaging with tensile and compression testing. During scanning the sample is subjected to a controlled load, while having the loading curve displayed on-screen in real time. The stage can be used in 2 modes: a continuous mode for compression or tension up to the maximum allowable load or until the maximum displacement; and a predefined mode in which the user can specify either the load or the displacement that should be reached.	 A photograph of the MTS2 - 2200N Material Testing Stage. It features a black cylindrical base with a silver-colored top section containing a blue, granular sample. The device is mounted on a dark surface.	Contact Micro Photonics for pricing
